

RADIANT CEILING PANELS

Clean. Quiet. Efficient.

Engineered radiant heating systems designed for efficient performance, architectural flexibility, and long-term reliability.

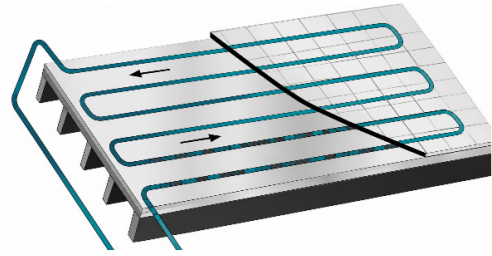

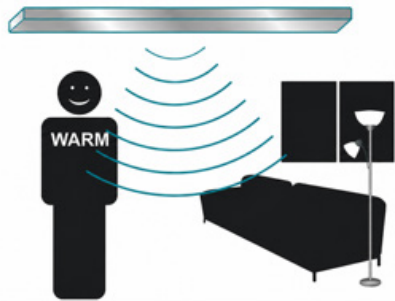

The logo consists of a teal square containing a white oval. Inside the oval, the words "AERO" and "TECH" are stacked vertically in a bold, black, sans-serif font.

HEATING SURFACES. NOT AIR.

Radiant heating panels transfer heat through infrared radiation to directly warm surfaces and people.

Hot water flows through copper tubing attached to aluminum panels, creating comfortable, uniform heat without relying on forced-air blowers or heavy convection currents.

WHY CHOOSE RADIANT HEATING SYSTEMS?

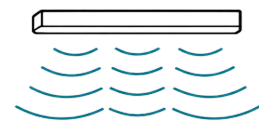

ENERGY EFFICIENT

Reduced system energy requirements while maintaining occupant comfort.

CLEANER AIR

No forced air or convection currents to circulate dust, pollen, and allergens.

EVEN, QUIET COMFORT

Uniform heat output without noisy equipment.

DESIGN & SPACE FLEXIBILITY

Reduce ductwork while integrating heating into the architecture.

OUTDOOR OR INDOOR

Ideal for indoor, semi-enclosed, and select outdoor spaces.

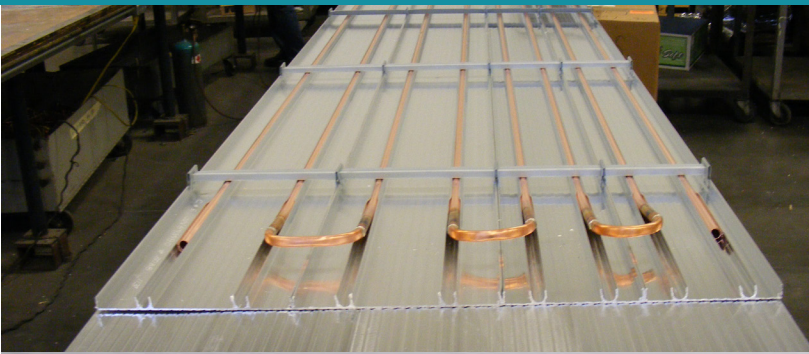

LOW MAINTENANCE, LONG LIFE

Virtually maintenance-free, with systems capable of lasting for decades.

RADIANT PANEL SOLUTIONS FOR EVERY SPACE

EXTRUDED ALUMINUM RADIANT PANELS

Linear interlocking panels designed for efficient heat transfer and installation flexibility. Available in multiple widths and face configurations, with field-modifiable construction.

RADIANT LAY-IN FORMED METAL PANELS (RLFM)

Large-format aluminum panels with continuous copper tubing bonded directly to the panel. Available in 2x2 and 2x4 sizes with standard and tegular corner configurations, perforated or unperforated. Can also be made to accept PEX connections upon request.
